

The New HTP-7.2 Home Theater Plate is now available!

An update to our popular and long-selling HTP-2 Home Theater wallplate is now available. The new HTP-7.2 wallplate is available for shipment now. The HTP-2 is being discontinued and replaced by this updated model. The HTP-2 will remain available only while supplies last.

Like the original HTP-2, the new HTP-7.2 Home Theater Wallplate is designed to simplify wiring connections in any home theater installation from a simple 5.1 system up to a 7.2 system. A single HTP-7.2 can also be used for a Dolby® Atmos 5.1 or 5.1.2 installation and by adding a second HTP-7.2, a full Atmos installation up to 9.1.4 can be supported.

More than just a new model number

The new HTP-7.2 design is a 2-gang Decora® style that offers four pairs of gold-plated 5-way binding posts on one Decora plate and two gold-plated RCA connectors combined with three pairs of 5-way binding posts on the other plate. This design allows you to mix and match pieces as needed for your installations. Labeling is kept universal by using an “A,B,C,D” and “1,2,3,4” system while you are free to add any custom labeling that you desire.

While the HTP-7.2 ships with a 2-gang Decora wallplate, you are free to break it up and use each of the halves as individual 1-gang Decora components in any system.

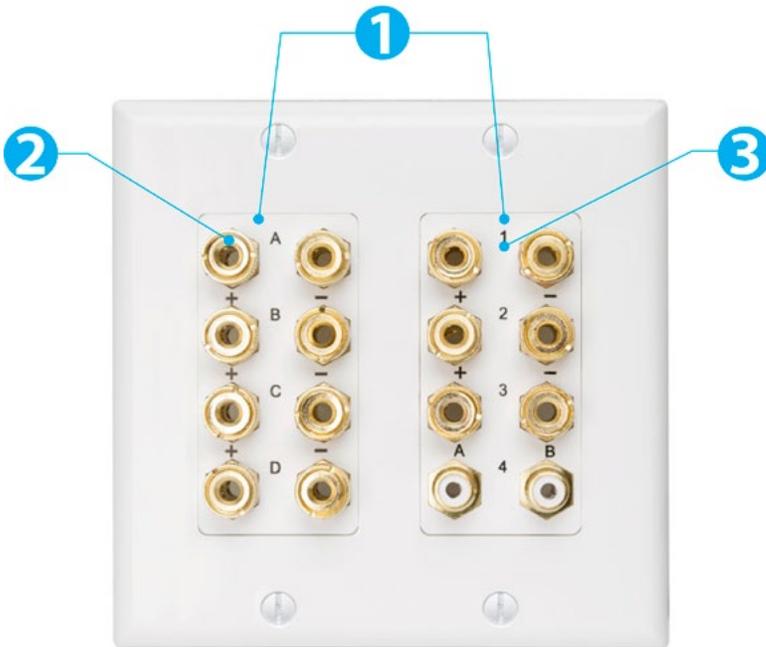

Simplified, no solder connectors

The HTP-7.2 uses dual 5-way binding posts on each side for any speaker connections and dual RCA connectors for subwoofers, or any RCA-type device that you’d like to use. No soldering is needed as it is plug-and-play on both sides of the wallplate. The gold-plated connectors ensure high-quality, durable, trouble-free connections perfect for any audio systems.

Simple labeling

The HTP-7.2 labeling allows for its use with any combination of up to seven 5-way binding posts and two RCA jacks with a dual Decora design so that the two included decora plates can be mixed and matched as needed or even converted into two separate* 1-gang decora plates.

1. Flexible Styling

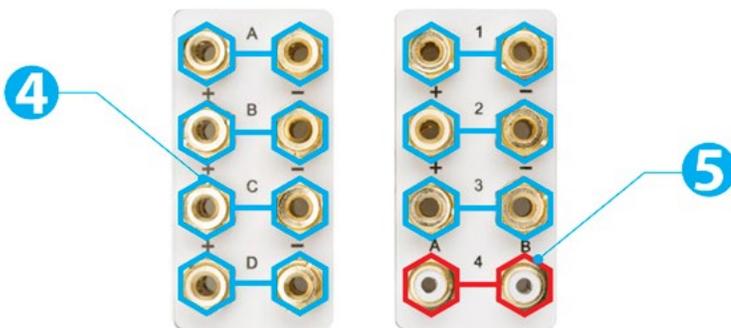

The new Decora® style design allows for easy integration into any décor

2. High Quality Connectors

Using only gold-plated connectors for both the 5-way binding posts and for the RCA connectors means trouble-free, durable connections for all of your audio gear

3. Multipurpose Labeling

By keeping the labeling simple with 1,2,3,4 and A,B,C,D, you are free to mix and match plates in any installation

4. Seven Pairs of 5-way Binding Posts

Full freedom to connect your speakers with any combination of bare or tinned wire, pins, spade lugs or single/double banana plugs

5. One Pair of RCA Connectors

Designed for subwoofer connections, these connectors can be used with any RCA compatible connection

6. Innovative design

The HTP-7.2 can be installed as a 2-gang design with the included cover plate, or you can mix and match each half as individual plates into any size Decora installation

7. Plug-and-Play

Double-sided connectors make for easy connections to either the 5-way binding posts or to the RCA connectors. No soldering needed on any of the connections.

8. Foolproof Connectivity

Color-coded 5-way binding posts for easy wiring every time
